Introducing the **JR Series**

The Wilson JR series first started production in 1942. The overall design and internal pieces have remain almost unchanged over the years. When used properly, this tester can provide years of reliable, repeatable results. In fact, many testers from the WWII era are still in use today, a testament to their durability. The JR series is available in vertical capacities of 4 inches (1JR), 8 inches (3JR), 12 inches (4JR), 16 inches (5JR), and 20 inches (6JR).

Special Features:

- **Reliability** - The JR series has proven it self with over 60 years of use
- **Good Value** - Starting around \$3,500, the JR will easily pay for it self over the years
- **Easy Operation** - Very little training is required to get good test results
- **Standard Scales** - The JR applies loads of 150Kgf, 100Kgf and 60Kgf, typical scales include C, A, B. Capable of testing all standard scales.
- **Utility** - With vertical capacities ranging from 4 to 20 inches, there's a tester for almost every application
- **Durability** - From commercial heat treats to smaller job shops, the JR has proven to be extremely reliable in long term use.
- **One Year Warranty** - A refurbished JR tester purchased from United Service Company Inc comes with a one year warranty, giving you piece of mind for your investment
- **Accessories** - Each tester comes with the following: diamond indenter, 1/16" ball indenter with tungsten carbide ball, 2 test blocks, 1 2" flat anvil, 1 spot anvil, one small vee anvil, and conversion chart.
